"As a manufacturer, we understand how efficiency plays a key role in our factory's productivity and profitability. Hi-Cool's retrofitting strategy and recommendation made us shift from air-cooled to the more efficient water-cooled screw-type packaged A/C system that delivered cost savings of 30% on our electrical consumption. Moreover, there was zero downtime on plant operations during this shift that kept our workflow on track. Our Plant 3 which runs 24/7 is now kept at the right temperature and humidity all the time. Hi-Cool continues to maintain our system professionally and we look forward to our continued partnership."
